

simple_hash_series-php:01

原地址：[GZCTF-challenges/simple_hash_series-php/01](https://github.com/GZCTF/challenges/tree/master/simple_hash_series-php/01)

```
1 import hashlib
2
3 # 遍历可能的token值
4 for i in range(100000000):
5     token = str(i)
6     md5_hash = hashlib.md5(token.encode()).hexdigest()
7     # 检查第2、15、18位是否相同且为数字，第32位是否为'3'
8     if (len(md5_hash) == 32 and
9         md5_hash[1] == md5_hash[14] == md5_hash[17] and
10        md5_hash[1].isdigit() and
11        md5_hash[1] != '0' and
12        md5_hash[31] == '3'):
13         print(f"符合条件的token: {token}")
14         print(f"对应的MD5: {md5_hash}")
15         break
```

访问 `IP:PORT/?token=422` 即可得到 `FLAG`
